Open cooling towers

Options and accessories

Sound attenuation

S1500E cooling towers use **quiet and low kW axial fans**, but to reduce noise even further, you can extend your S1500E cooling tower with <u>sound attenuation</u>:

- The intake attenuation is constructed out of vertical rectangular baffles
- The discharge attenuator consists of an isolated plenum

or choose the <u>Whisper Quiet fan</u> alternative.

Your <u>local BAC representative</u> can explain any of the above sound attenuator options in more detail and provide you with <u>sound pressure and sound power data</u>.
